SKILLS AND STRENGTHS

- **Programming Skills** - Python, SQLAlchemy, FastAPI, JavaScript, TypeScript, React, Redux, MongoDB, SQL, Groovy, C, C++
 - **Infrastructure & Tools** - Docker, Jenkins, Terraform, Git, Linux, CMake, PostgreSQL, MS SQL Server, Azure & AWS Cloud Services, Prisma Cloud, MCP (Model Context Protocol), OpenShift
 - **Soft Skills** - Communication, Detail Oriented, Collaborative, Innovation, Accountable, Growth-Oriented, Self-Driven
-

WORK HISTORY

PNC Bank

Software Engineer

Remote / New York, NY
January 2024 - Present

PNC's Cloud Security Development team provided hands-on experience in building and maintaining secure, automated solutions in public cloud environments. My achievements in this role were as follows:

- Developed and enhanced cloud security automation tools to assess and enforce compliance across AWS and Azure environments, ensuring alignment with enterprise security policies and NIST standards.
- Implemented CI/CD pipeline integrations for infrastructure-as-code (IaC) scanning and policy enforcement, enabling proactive posture management at build and deployment time.
- Designed and contributed to a cloud security reporting database application that provided key stakeholders with actionable insights into cloud security health.
- Collaborated with cross-functional security engineering teams to define product requirements and translate them into scalable cloud security solutions.
- Maintained up-to-date knowledge of public cloud technologies and best practices to support security automation and compliance initiatives.

Microsoft Leap

Software Engineer

Atlanta, GA / New York, NY
January 2023 - July 2023

Microsoft Leap is an apprenticeship offered by Microsoft with the goal of providing real-world engineering experience to individuals from non-traditional backgrounds. I worked within Azure's Datacenter Firmware team, where my achievements were as follows:

- Developed kernel-level drivers in C to remotely configure and monitor hardware state for servers across the Azure datacenter fleet.
- Designed and implemented a custom XML parser from scratch in C to interpret hardware configuration data, built on top of existing internal firmware tooling.
- Built automated unit tests for the parser, increasing code coverage from 50% to 90%.
- Delivered impact-less hardware configuration improvements at scale, reducing deployment time by up to 90% and contributing to a projected \$100M/year reduction in Azure data center energy costs.

Willis Towers Watson

Associate Broker

New York, NY
September 2020 - January 2023

I previously worked as an Associate Broker for WTW's Cybersecurity Risk Management practice. To this fast-paced environment I brought innovation and a passion to learn. My achievements in this role were as follows:

- Built and maintained dynamic Excel tools to analyze and visualize 5,000+ data points for cybersecurity benchmarking across clients.
 - Delivered internal training sessions on custom analytic tools, demonstrating strong collaboration and knowledge-sharing capabilities.
-

PROJECTS

Personal AI Infrastructure & Agentic Development

- Built a local LLM inference server using llama.cpp, serving models up to 35B parameters through REST API endpoints.
 - Built an MCP server exposing personal finance data to a local LLM, enabling natural language queries over transaction history and portfolio positions.
-

EDUCATION

Rutgers University

Bachelor of Science, Major in Economics; Minor in Statistics

September 2016 - May 2020
New Brunswick, NJ

Certifications

- Azure Security Engineer (AZ-500)
- AWS Certified Cloud Practitioner
